Australian farmers and contractors will now have a better way to synchronise their operations with a leading edge online management system. The system has been developed for industry consultant Kelvin Bella by Range Media from Toowoomba, Queensland.

Known as FarmCentral, the interactive website will enable farmers and contractors to access one another in a simple and cost effective way.

The FarmCentral integrated management tool links farmers and contractors in the grain, cotton, earthworks and transport industries.

How it works

The process works by farmers registering their location, area and crop size to be harvested and starting date. Contractors will register and provide their equipment details, and availability. The system then automatically searches and updates both parties daily with appropriate matches, using email or SMS, depending on the users' preferences.

Participation can be at four levels of membership, depending on the number of services to which access is required. Each category will provide access to the full range of services including harvesting and picking, haulage, spraying, dry hire, farming, baling, seed treatment, transport and earthworks.

The site will also contains a Business Services Directory that details support services in every region, including parts, repairs, accommodation, transport, and weather information.

Andrew Moon from 'Gillebri Cotton' said: "We are both farmers and contractors, and FarmCentral will have a significant role in the future running of our operation. Both finding continuous work and available contractors are always a challenge."

Ian Todd who grows cotton and grain at 'Waggaby' St George and also owns a machinery dealership said: "It is always difficult for strangers in town to know where to get the right help with repairs and parts when they desperately need to keep going. Kelvin is a very forward thinker and I wish him well with the venture."

Kelvin has conducted extensive research speaking with and surveying producers and contractors in south west Queensland and northern New South Wales about the concept and the response has been very positive.

Range Media Toowoomba has worked closely with Kelvin to develop the website.

Brian Sullivan, managing director of Range Media said: "Agricultural businesses are already very much in the dot com phase and this will only increase with the up-and-coming generations of farmers in the industry."

FarmCentral is a one stop shop for rural businesses and will remove the time-consuming and often expensive hassle of searching for work or contractors.

Hook up on the Internet

A new website to link farmers with contractors across the grains, transport and earthworks industries was launched last month.

Farm Central developer Kelvin Bella said the website provided an easy cost-efficient way for farmers and contractors throughout Australia to find each other without the need for costly advertising or time consuming phone calls.

“Once your details are entered, the system will search automatically and will continue to update you daily by email or SMS,” he said.

Farmers register their location, area and crop size to be harvested and starting date. This also applies for earthworks and transport requirements and can be used for other types of contracting such as hay carting, baling or grain carting.

Contractors will register and provide their equipment details, and availability. The system automatically searches and updates both parties daily with appropriate matches, using email or SMS, depending on the users preferences.

Mr Bella said the idea for FarmCentral as a one-stop shop to link farmers and contractors arose when a lot of trucks left the industry in Queensland to go mining - a situation repeated in other rural communities across the country.

The website gives farmers, harvesters, truck drivers and earthworks contractors the ability to plan work months in advance, but can also be used at the last minute.

“In cases when work or a contractor falls through, you can go straight to the website and minimize costly delay,” Mr Bella said.

“If a contractor is in a certain area and it rains, then they can search for work on another property while crops are drying out. Rather than travel hundreds of kilometers away for other work, they may find a farmer looking for contractors within the same district.

Participation can be at least at four levels of membership, depending on the number of services to which access is required. Each category will provide access to the full range of services including harvesting, haulage, spraying, dry hire, baling earthworks and transport. Information can be found at www.farmcentral.com.au

Website timely link for farmers

A New online service has been launched to help farmers and contractors access one another in a timely way.

With a busy grain harvest season approaching, the interactive FarmCentral website launched by St George – based industry consultant Kelvin Bella enables farmers and contractors in the grain, grain cotton, earthworks and transport industries throughout Australia to link up easily.

Farmers can register their location, area, crop size to be harvested and starting date while contractors can register and provide equipment details and availability.

The system then automatically searches and updates both parties daily with appropriate matches, using email or SMS, depending on the user's preferences.

Searches can also be conducted by the farmer or contractor manually.

Connecting Farmers and Contractors.

With a busy grain harvest season approaching, now is the time for farmers and contractors to access one another in a cost effective and timely way.

An Australia-wide online management system, FarmCentral was recently launched by St George based industry consultant Kelvin Bella.

The interactive website enables farmers and contractors in the grain, cotton, earthworks and transport industries throughout Australia to link up easily.

The process works by farmers registering their location, area and crop size to be harvested and starting date. This also applies for earthworks and transport requirements.

Contractors will register and provide their equipment details, and availability. The system then automatically searches and updates both parties daily with appropriate matches, using email or SMS, depending on the users' preferences.

Searches can also be conducted by the farmer or contractor manually.

Kelvin said FarmCentral gives farmers, harvesters, truck drivers and earthworks contractors the ability to plan works months in advance.

"In cases when work or a contractor falls through, you can go straight to the website and minimise costly delays."

"If a contractor is in a certain area and it rains then they can search for work on another property while crops are drying out. Rather than travel hundreds of kilometres away for other work, they may find a farmer looking for contractors within the same district."

"Farmers have peace of mind that they can organise harvesters and trucks in advance without a mad scramble at harvest time. If during the season they require more contractors or transport, they can log in and find someone straight away."

"FarmCentral is not just another website but is an integrated management tool and working site that makes life easier."

It was after driving from St George to Dirranbandi one harvest season and seeing corrugated iron signs seeking harvesters that Kelvin realised there was a better way.

"There have been other cases of farmers wanting laser levelling done but local earth workers were busy, but down in New South Wales earth moving businesses were in desperate need of work. This website is about bringing people together for the benefit of the whole industry."

The site also contains a Business Services Directory that details support services in every region, including parts, repairs, accommodation, transport, and weather information.

Participation can be at four levels of membership, depending on the number of services to which access is required. Each category will provide access to the full range of services including harvesting and picking, haulage, spraying, dry hire, farming, baling, earthworks and transport.

Membership subscriptions are for 12 months and unlike other forms of advertising, your details can be accessed at any time, giving your coverage throughout the year.

Andrew Moon from 'Gillebri Cotton' said: "We are both farmers and contractors, and FarmCentral will have a significant role in the future running of our operation. Finding continuous work and available contractors is always a challenge."

Ian Todd who grows cotton and grain at 'Wagaby' St George and also owns a machinery dealership said: "It is always difficult for strangers in town to know where to get the right help with repairs and parts when they desperately need to keep going. Kelvin is a very forward thinker and I wish him well with the venture."

Kelvin has conducted extensive research, speaking with and surveying producers and

contractors in south west Queensland and northern New South Wales about the concept and the response has been very positive.

Range Media Toowoomba has worked closely with Kelvin to develop the project.

Brian Sullivan, managing director of Range Media said: “Agricultural businesses are already very much in the dot com phase and this will only increase with the up-and-coming generations of farmers in the industry.”

“FarmCentral is a one stop shop for rural businesses and will remove the time-consuming and often expensive hassle of searching for work or contractors.”
